

Anti-Insect Yellow

ANTI-INSECT YELLOW has been specially designed to provide insect-repellent properties to flexible PVC while maintaining all the existing qualities (clarity, brightness, durability, flexibility, and strong resistance to impact).

ANTI-INSECT YELLOW is infused with natural citronella, creating a repellent effect that deters insects from entering protected areas. The distinctive insect-opaque yellow colour acts as a visual barrier while the citronella-infused material forms an effective, natural defence against flying pests. **ANTI-INSECT YELLOW** is non-toxic, compliant with food safety standards, and engineered for long-term outdoor performance.

ANTI-INSECT YELLOW is specifically recommended for strip doors, curtain doors, and partitions used in environments where insect control is critical. It effectively reduces insect infiltration in food production areas, hospitality settings, healthcare facilities, schools, factories, workshops, commercial shops, public buildings, and private residences.

The repellent agent within **ANTI-INSECT YELLOW** is a natural, non-toxic solution derived from citronella, widely used for pest control, and recognized as safe for humans and food contact environments.

Features

- Infused with natural citronella for insect-repellent effect.
- Insect-opaque yellow colour acts as a visual deterrent
- UV-stable and outdoor-rated for long-term performance.
- Non-toxic and compliant with food safety standards
